SUMMARY

Senior QA Automation Engineer with 6+ years of experience designing and scaling test automation frameworks across web, API, and mobile platforms. Expert in Playwright, Selenium, Cypress, and Appium, with strong programming skills in TypeScript, JavaScript, Python, and Java. Proven record of integrating automated testing into CI/CD pipelines, driving API and performance testing, and reducing defect leakage while accelerating release cycles. Skilled at translating quality metrics and risk assessments into clear, actionable insights for cross-functional Agile teams.

TECHNICAL SKILLS

Test Automation: Playwright, Selenium WebDriver, Cypress, Appium, TestNG, Page Object Model (POM), BDD/Cucumber, TDD, test automation frameworks

Languages: TypeScript, JavaScript, Python, Java, SQL

API & Performance: REST API testing, Postman, JMeter, performance testing, load & scalability testing

CI/CD & Version Control: Jenkins, GitHub Actions, GitLab CI, CI/CD pipelines, Git

Testing Types: Functional, regression, cross-browser, E2E, visual regression, mobile testing, UAT, exploratory, risk-based testing

Process & Tools: Agile/Scrum, JIRA, SDLC/STLC, test planning, test case design, defect management, stakeholder communication

PROFESSIONAL EXPERIENCE

Senior QA Automation Engineer | Axzora Resourcing LLC, USA

Jun 2025 - Present

- Architected scalable end-to-end automation for web and mobile feature releases, covering regression, exploratory, and UAT testing to support zero-defect production deployments.
- Built a production-grade visual regression framework in Playwright and TypeScript using pixel-level threshold comparisons and masking for non-deterministic, ML-assisted UI, cutting regression cycle time by 40%.
- Defined and enforced a comprehensive test strategy across all release phases, validating asynchronous system outputs and AI-driven features.
- Led defect management through structured release sanity checks and pre/post-deployment fix validation, documenting precise root-cause analysis in JIRA.
- Communicated quality metrics, risk assessments, and automation outcomes to cross-functional stakeholders, advancing QA documentation standards and team collaboration.

QA Automation Engineer | Community Dreams Foundation, USA

Sep 2024 - Jun 2025

- Engineered automated UI, API, and mobile test suites with Selenium, Cypress, and Appium, reducing manual testing effort by 30% and improving release velocity across sprint cycles.
- Designed REST API validation workflows in Postman integrated into CI/CD pipelines via GitHub Actions, achieving 100% automated regression coverage across all service endpoints.
- Executed performance, load, and scalability testing with JMeter, identifying critical bottlenecks and improving response-time stability by 25% for high-traffic modules.
- Managed full SDLC/STLC test planning and JIRA-based defect tracking, maintaining 100% test coverage across all sprint deliverables.

QA Engineer | Tata Consultancy Services, India

May 2021 - Jun 2022

- Built scalable Selenium and TestNG automation frameworks using Page Object Model, increasing defect detection rate by 35% and expanding test coverage across enterprise web platforms.
- Designed and executed functional, regression, risk-based, and cross-browser testing while validating REST APIs via Postman and SQL queries, reducing integration defects by 20%.
- Defined test strategy and streamlined STLC documentation and defect management, cutting maintenance overhead by 25% and improving sprint throughput.

QA Analyst | Accenture, India

Dec 2017 - May 2021

- Delivered end-to-end QA and automation testing across web and mobile applications for global enterprise clients, reducing production defects by 10% through rigorous risk-based test strategies.
- Validated backend data integrity using SQL and ran performance and scalability testing with JMeter to ensure system reliability under high-traffic conditions.
- Collaborated with global Agile/Scrum teams to improve release quality and sprint velocity through clear stakeholder communication and analytical problem-solving.

PROJECTS

Playwright End-to-End Automation Framework | github.com/5ushma

- Designed a scalable end-to-end test automation framework using Playwright and TypeScript with the Page Object Model for maintainable, reusable test suites.
- Implemented cross-browser and parallel execution and integrated runs into CI/CD for automated testing on every commit, improving release feedback speed.
- Tech: Playwright, TypeScript, Page Object Model, CI/CD, cross-browser testing.

Mobile App Reliability & Stress-Testing Suite

- Built an automated reliability suite for an Android application to surface flaky and failure-prone flows under sustained stress.
- Ran repeated stress and load cycles, captured failures, and classified them by type and root cause; implemented targeted hardening improvements.
- Produced a before/after reliability benchmark demonstrating measurable stability gains across critical user flows.
- Tech: Appium, Python, Android, stress testing, failure classification, reliability benchmarking.

EDUCATION

M.S., Computer Science | Southern Methodist University (SMU), Dallas, TX

May 2024

B.S., Computer Science | Jawaharlal Nehru Technological University (JNTU), India

May 2017
